

Created by **VERSATEX**, the patent-pending Stealth Trim System is designed with the builder in mind. Our system, which features cornerboards and window surrounds, will allow for faster and more aesthetically pleasing installations time after time. The 3/4" pockets will accommodate nearly any siding product including fiber cement, cedar, and vinyl.

The Stealth skirtboard is the answer to meeting code requiring 6" ground or deck clearance for fiber cement sidings as well as composite and wood sidings.

Find **VERSATEX** at your local dealer.
